## B. Course Objectives and Learning Outcomes

**1. Course Description :** The purpose of this course is to expose to some simple mathematical models that can be formulated and solved for large spectrum of managerial problems. As well as reviewing some problems that can be tackled quantitatively, the methods and software available for doing so. The emphasis is on models that are widely used in diverse industries and functional areas. The topics of this course include mathematical programming such as; linear programming (graphical, simplex methods and sensitivity analysis), transportation problem, assignment problem and project scheduling (CPM & PERT), Inventory Models (EOQ, EPQ, and discounted EOQ), queuing models (single-channel queuing problem).

## 2. Course Main Objective

- Illustrate some simple mathematical models that can be formulated and solved for large spectrum of managerial problems.
- Analyze Linear Programming problems.
- Illustrate the Transportation and Assignment Problems.
- Demonstrate the Project Scheduling (CPM & PERT)
- Define Inventory Models
